

SESSION 5 – Mutli-Page Application with React Router

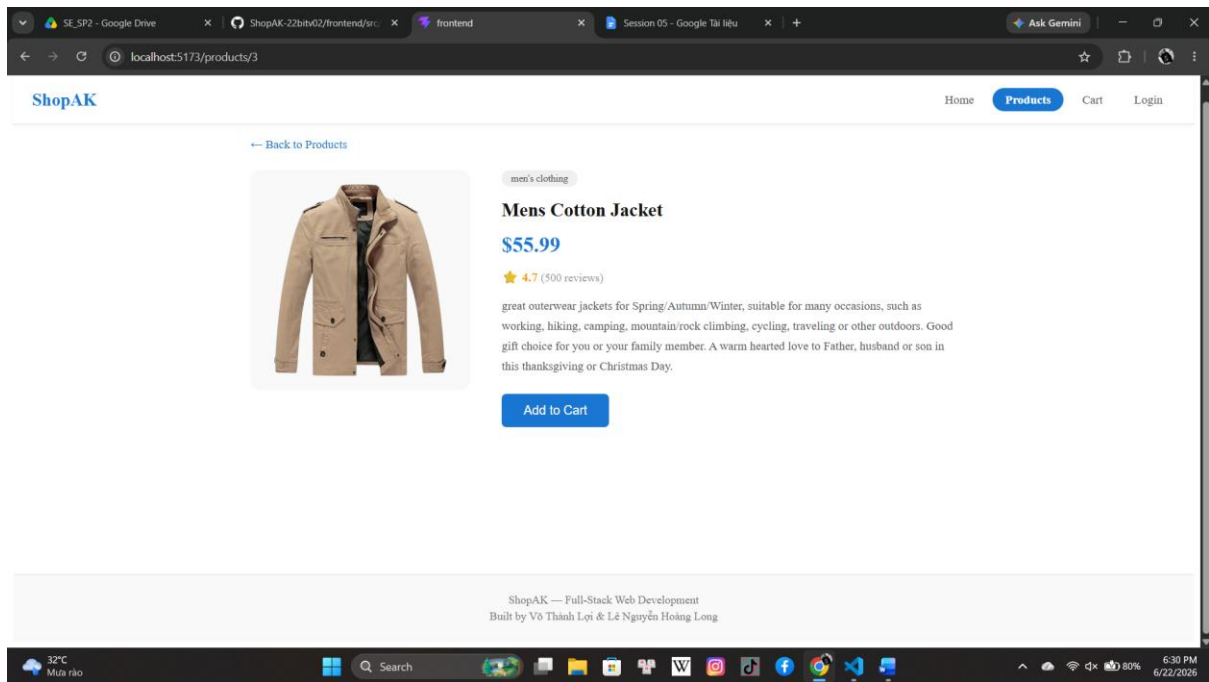

Final Result

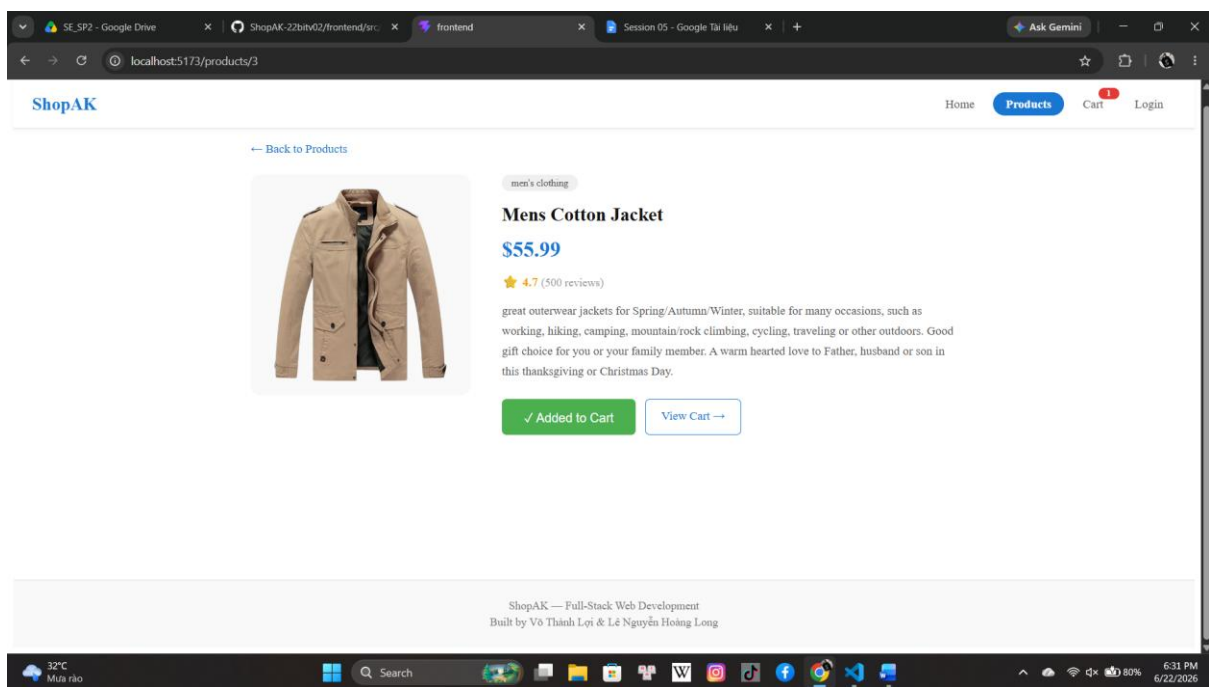

When click shop now it move directly to Products Page

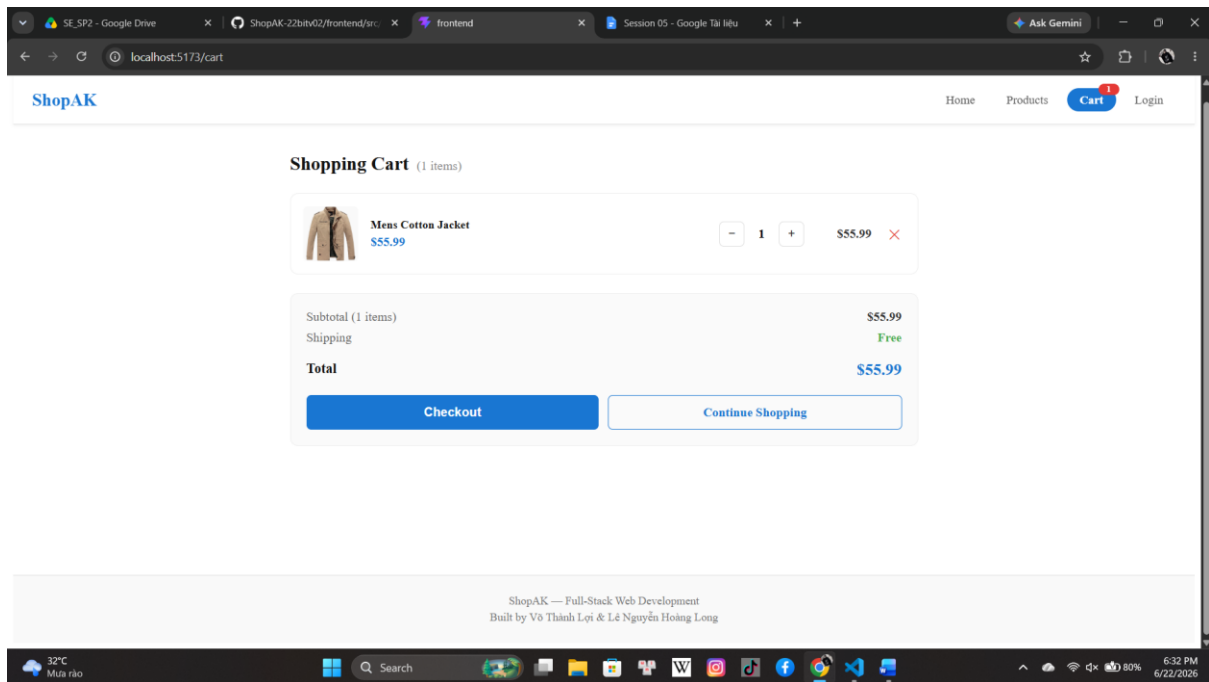

Inside we can View Details the product, search the product by name and sort all kinds of thing like: Price, and other we can also clear filter when we done searching to view all the product again

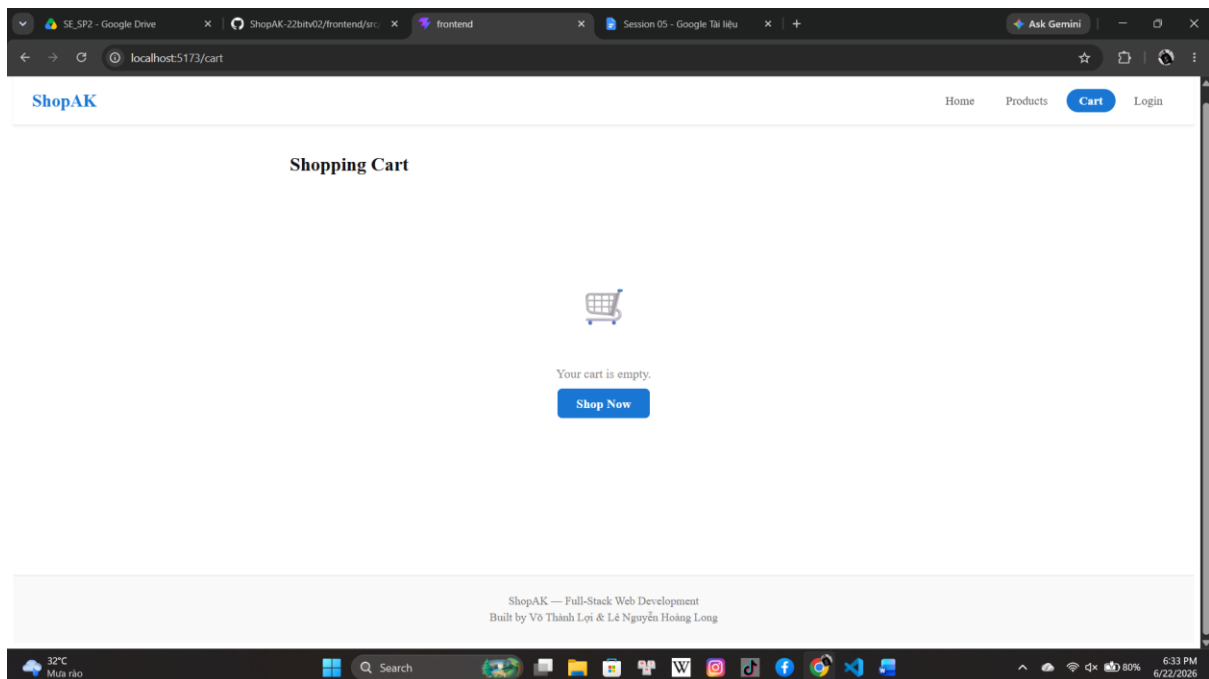

When we click add to cart it will announce the cart that have item being added we havent reproduce the check out part yet

Inside the cart we can see the product that we added

We can delete the product that we doesn't want and continue to shopping

And this is a simple login page for the customer to sign up and sign in
